

**IT. FOR MANKIND**

[dimedoha.com/ennovations/](http://dimedoha.com/ennovations/)

## INTRODUCTION

Network Consultancy Services is a subsidiary venture of Dime International, which is a mechanical engineering company with expertise in structural fabrication, blasting and painting for the past 10 years in Qatar.

NCS are a complete IT infrastructure solutions provider focusing on problems and solutions rather than on buying & selling. The strategy is to deliver state of the solutions rather than on buying & selling. The strategy is to deliver state of the art solutions that solve problems, increase efficiency and contribute to the betterment of Humanity.

## WHY NCS

### IT With a Human Touch

Technology for the sake of technology is meaningless and we at NCS believe in IT for Mankind.

IT has evolved. Regardless of version or variation, human involvement is crucial. Whether localizing medical content, branding material to showcase your brand, or reaching millions on the Internet, top quality is treated as a top priority.

Only highly qualified professionals provide top-notch quality. The beauty of working with an established provider like NCS is you get the best of both worlds: a polished, experienced and professional team and top-echelon products and service.

## VISION

## STRENGTHS

### ① Strengthening Relationships

NCS works to facilitate and strengthen relationships between people and causes to make the world a better place.

### ② Providing Dynamic User Experiences

NCS finds clients' desire the ability support a meaningful and simple life. Our clients understand, and thrive on minimalism. A person rests easy when they've passed their day working to make the world a little better for their friends, families and clients instead of being busy gathering possessions and trinkets along the way. We help make a positive, fulfilling experience happen for our customers..

### ③ Supporting Goal Achievement

We help our clients live simple, meaningful lives. Our vision of success not based on financial standing. We help our clients feel at peace with themselves and their world despite ups and downs.

## VALUES

NCS understands the definition of the 'GOOD LIFE' changes, but relies on the four pillars of value to improve humankind:

- ① Balanced Simplicity
- ① Meaningful Connections
- ① Financial Independence
- ① Business Goals Which Help Clients Succeed

① Our strengths are aligned with our belief in humanity.

① We excel in providing visionary leadership as our team consists of experts with extensive experience in the IT engineering industry.

① We offer our clients lab tested and proven technology which focuses on highly specialized solutions for customer needs.

① From time to time, we conduct client reviews and audits that are an essential component which reflects our level of professionalism.

① Our demonstrated work ethic and commitment to excellence are reflected in a mutually beneficial and loyal relationship with our clients.

## OBJECTIVES

① While our elegant solutions speak for themselves, we work to build a healthy, friendly and productive environment..

① Our work ethic extends to dealers and systems integrators as they work with us for survival and growth.

① Our company values talent, dedication, and relationship building. For us, it's more important than the money

① We strive to establish a platform which brings out the extraordinary in our workers, our clients and ourselves.

# SOLUTIONS

## 1. STRUCTURED CABLING

Our core competency is the strength of skilled workers and project management team. Our structured cabling team has undertaken some of the most prestigious and challenging projects in the country.

The team has shown immense strength under pressure while keeping up with critical project deadline in both commercial and residential project.

## 2. CCTV SURVEILLANCE AND RECORDING SYSTEMS

Known as the 'THIRD EYE', surveillance systems have become an integral part of our lives.

We possess a strong team of engineers with know-how on how to design, install and configure CCTv systems for residential projects.

We also have a team of skilled experienced workers who can install cameras as per MOI standards.

## 3. WIFI SYSTEMS

With higher bandwidths of internet and BYOD wifi systems have become very common even at homes and small offices.

## 4. HOME AUTOMATION

Home automation is building automation for a home, called a smart home or smart house. It involves the control and automation of lighting, heating such as smart thermostats, ventilation, air conditioning, and security, as well as home appliances.

NCS in association with Control4, has set up a fully trained team who set up a smart home system.

## 5. VIDEO DOOR PHONE

Video door-phone also known as video door entry or video intercom is a stand-alone intercom system used to manage calls made at the entrance to a building, residential complex, detached family home or workplace with access controlled by audiovisual communication between the inside and outside. The main feature of video door entry is that it enables the person indoors to identify the visitor and, if and only if they wish, engage in conversation and/or open the door to allow access to the person calling.

## 6. UNIFIED THREAT MANAGEMENT SYSTEM

Unified Threat Management (UTM) involves an approach to information security whereby a single hardware or software-installation provides multiple security functions. This contrasts with the traditional method of having point solutions for each security-related function. UTM simplifies information-security management by providing a single management and reporting point for the security administrator rather than managing multiple products from different vendors.

NCS is partnered with Sophos to provide network & end point firewall solutions.

## 7. INTERCOM SYSTEM (IP & ANALOG)

An intercom (intercommunication device) is a stand-alone voice communications system for use within a building or small collection of buildings, functioning independently of the public telephone network. Intercoms are generally mounted permanently in buildings and vehicles. Intercoms can incorporate connections to public address loudspeaker systems, walkie talkies, telephones, and to other intercom systems.
